Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Chriest

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I'm sure there's ways yet discovered of getting at that gas without destroying valuable water sources. If not, then they have no business in the fracking business. I firmly believe both the users and producers of energy should bear the costs and not pass along externalities. Ultimately, the tax payers pick up the tab. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

J Elise Elise Edwards

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. All fossil-fuels will be "has-beens" in 20 years as we shift to electricity-driven vehicles and solar-thermal and wind electricity-generation and storage for solar and wind down-times from such companies at: www.ambri.com ; www.sopogy.com ; www.suntrough.com ; www.solel.com ; www.zenithsolar.com ; www.ausra.com ; and www.arevasolar. com (or www.areva-solar.com. Government should not give the Capital markets contradictory signals by permitting frackers to dump their environmental trash on governments that are already nearly broke!

Sincerely,

Thomas Kuna-Jacob MA

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic waste water in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lauren Maples

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

William Kazak

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rich Harrington

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert Puchli

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jack Coventry

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Shanna Sloan

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

There are so many negatives already given for opposition to fracking, so I'd like to go in a different direction. Can we consider the growth and development of some of the world's most magnificent features for a moment? I'm not thinking man-made but planet-made, like waterfalls, mountains, oceans, plains, rivers, canyons, forests, jungles, lakes, and all the flora and fauna that live in or around these features. Now consider what can and has, in some instances, happened when homo sapiens decides to "alter" natural features for some "gain". Forests are cut for wood to build structures in which to live and work and cut to make more space for other activities, like farming or home construction . In the cutting process, animals are displaced, some of which had small ecological niches and when they're gone, those animals may not find another habitat and, therefore, may not survive. Oceans are home to a vast number of diverse species who live and breathe, breed, and multiply , and, if in large enough numbers, offer us a source of food. However, oil spills, pollution from industrial facilities, illegal dumping from laboratories, medical waste, factory farming waste leeching into rivers then into the ocean are all shortening the live of our oceans. But I'm sure your minds are all made up as to whether pushing fracking forward for your own or a friend's profit is the way you'll vote. Seems like such a malicious joke to hear Christians quote the Bible to prove any idiotic idea, but tend to sidestep something about be stewards of the earth. Stewards must translate into exploiters, destroyers, rapers of the earth. I get so tired of reading about all this crap, just can't get my head around the fact that some folks think all these destructive activities are perfectly dandy. How I wish you would prove me wrong~~~ Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Tammy Lusciatti

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Samantha Maffeo

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

The State Must Be Nuts: It's proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Pat Reese

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Steven Holubek

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rebecca Blueter

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Diane Kargahi

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David Markowicz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

jessiah Baillies

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Barbata H

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Dear Sir/ Madame: In my view, the fracking rules you propose are dangerous and will not protect Illinoisans from fracking. As I see it, the draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe, in my view. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking, in my perspective. For safety, I request you scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Myra Walden

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Have you bothered to see the damage fracking did to eastern Colorado last summer????? That whole area looks like a bomb blast thanks to fracking, not to mention the water has been destroyed! This is not an isolated incident so don't give me any more lies about that. What is the matter with you GUYS????? Wake up and smell the coffee. The prohibitive cost to Nature and the people around fracked land is astronomical. Go FRACK YOURSELF!

Sincerely,

Lonnie Farr

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

M Jones

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from the pollution and habitat destruction that results from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing only paltry fines on companies that violate the rules. The bottom line is that no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, wastes huge amounts of potable water, and accelerates climate change. Only an all-out ban on fracking will truly protect Illinoisans from the environmental and health damages that are inherent in the process - even when it is done "cleanly" by industry standards. We need to scrap the proposed regulations and ban fracking in Illinois.

Sincerely,

Darcy Leach

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Elizabeth Wright

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Gwen Kleinschmidt

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. Our natural resources should NOT be used to pad the wallets of greedy businesses that will despoil the environment and our health. Frackers need to go back to the drawing board and think of a new, environmentally safe way to frack. They are taking the lazy way out and the citizens will be bearing the brunt of their damage. That is simply unacceptable.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Geoffrey Bodwin

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Most of us understand that you want to be able to grease the skids to fracking permits. You are willing to negate the clean air and water acts for which citizens fought. You seem to think we will forget about that fight. You seem to think we will forget who gave away our beautiful parks and sparkling rivers to polluters. But I'll remember that, if you fast-track fracking permits, the terribly misnamed Department of Natural Resources let oil and gas interests take away our health and well being. People are a natural resource. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

grant dittmer

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I have carefully watched the results of fracking in other areas of our country. I have seen how the public... individual citizens have not been able to depend on governmental agencies to protect their property and health as we in America have come to expect from such. We need better in Illinois! We cannot follow blindly, knowing the destruction that has already happened elsewhere. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Nancy Plankis

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David Weible

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

It appears that we have learned nothing from the industrial revolution. Water and air are not replaceable and should be above all concerns for some company and a few jobs. Where are we to go if our water is spoiled? Who will pay? Why don't we have a deal like Alaska where the citizenry will directly benefit if it is so profitable? The chemicals used if it gets into the aquifer will be devastating and cleanup in the billions of dollars that we don't have. This state has been poorly governed let us not continue the trend.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

mike Edwin nolan

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Camille Miller

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ken Peterson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Danaka Williams

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Doris Rhine

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Dianne Entwhistle

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Peggy Beyer

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

richard Sodergren

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The IDNR can do better...and the citizens of Illinois deserve better from this agency! The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. This is unconscionable, and unethical behavior on the part of every decision maker within the IDNR. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. It is time for the IDNR to use science and the charter to protect public health, not pressure from big oil lobbyists, guide policy.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Cristin Zanocco

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Sue Stolzer

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Troy Brown

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. We need to protect our environment at all cost making is necessary to reject the rules from the DNR that are inadequate. Step back and support a moratorium on fracking until we have strong rules to protect Illinois!

Sincerely,

Joanne Wood

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

John Massman

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Christina Frase

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jillian Gray

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Madeline Gelis

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lynn Philyaw

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Olga Shafran

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. LOOK at all the sinkholes showing up in states where they never happened before. PLEASE put two and two together!

Sincerely,

e D Barber

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Steve Karcher

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mark Schmitt

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Fleisher

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Fracking is even more devastating for public health and the environment than dumping toxic waste. It not only exposes every living thing to toxic chemicals, contaminating soil, air, and water - it disturbs the geology of the surrounding area, creating potentially hazardous instability. I am completely against fracking in any state, but if it is allowed, it must be RIGOROUSLY regulated. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Edgar Gonzalez-Baeza

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are inadequate and will not protect Illinois residents from the dangers of fracking. It is clear that fracking poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. How are we to protect ourselves from these "secret chemicals" that are being used by the fracking industry? The draft regulations make it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water. Further, only paltry fines are levied on companies that violate the rules. That simply makes the fines "the cost of doing business" rather than a punishment for a violation of the law. I want strict controls and transparency of the fracking industry in Illinois. The DNR can do better for the people of Illinois.

Sincerely,

Richard Hosteny

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Tifani moot
