RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Zack Malitz

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Hillary J Colby

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. We MUST protect our water's in Illinois, it is OUR responsibility!!

Sincerely,

Mary Hughes

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Michael Loriaux

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Vicky Tindall

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patrick Kwiatkowski

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

We need our ground water and crop lands to be safe from industrial fracking poisons. What are the chemicals? Just name any industrial WASTE that the company does not want to pay to be properly disposed of- that is what they pump into their wells. On our lands, they do this, and it leaches up gradually in some cases and explosively in others, following natural cracks in the rock strata. IT IS A BAD IDEA, plain and simple. End it! -C.A. Johnston Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jim and Pat Yuvan

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Cecelia Benelli

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Alice Plonka

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Yatsk

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Charlie Leseure

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Rosalind Hurwitz

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

John Meeks

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Cindy Kasnicka

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Here in Illinois we have the opportunity to learn from the mistakes made by other states, who eagerly opened their doors to fracking based upon the perceived economic benefits. The economic gains from fracking are easy to see. What only gets revealed over time is the dreadful cost of polluting our water. These are costs that generations of Illinois citizens will continue to bear, in the form of a toxically polluted water supply. Please, please think ahead: the long-term costs for the state (in environmental degradation and public health) dwarf the short-term gains produced by allowing these businesses to begin using hydraulic fracturing technologies in Illinois. I know you have heard the horror stories about the health problems and environmental destruction caused by the introduction of hydraulic fracturing in other states. We still have the chance to escape their fate. We still have the chance to keep our drinking water safe. After all these other states have gone down to the path of energy production, the value of our uncontaminated water will rise. From an economic perspective alone, that seems important. I beg you to opposed the Illinois Hydraulic Fracturing Regulatory Act, which does not serve the best interests of Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Joe Hehn

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Pete Thelen

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

With all the cases of water contamination, the earthquakes in Texas happening around fracking sites, etc. The towns where the drinking water catches on fire.. Why would you want this in our state? The energy industry could invest in alternative energy sources but the profit margin might be smaller so they continue to push for legislation that lets them pollute our environment and leave the taxpayers to clean up their mess. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Marty Raymon

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Amalie Caahan

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Matthew Strong

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Donald Hanrahan

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Mary Tokar

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Joyce Good

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

walter McAllister

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Elinore Olsen

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Hall Hanes

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Barry Fredrick

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Tony Jones

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

A S

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Illinois Department of Natural Resources: Talk about reckless endangerment! Surely you realize that millions of people across the state may lose access to local drinkable water because of tracking. That trackers don't have to disclose the identity of the chemicals they force into the ground near water supplies, or run baseline tests on local water quality before tracking begins. That tracking could seriously destabilize the land upon which our aging nuclear reachers sit. And that tracking is not necessary for the energy future of this country. It is simply a bonanza for companies that should be turning to better things, such as clean energy. Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

n Wellington

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Deborah Marak

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

BAN FRACKING IN ILLINOIS! Your proposed fracking rules are TOTALLY inadequate and will not protect Illinoisans from the proven dangers from fracking. The draft regulations create a series of large loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to destroy Illinois.

Sincerely,

Sandra Laase

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Lauren Dentzman

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Anwar Saeed

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

I am one of the original, modern environmental/energy/conservat ion activists dating back to around the very first "EARTH DAY" (Wednesday, April 22, 1970), over 43 years ago. I have a Bachelor of Science (B.S.) Degree in Biology and Environmental Studies from Dana College, Blair, Nebraska. I am the Vice President of the Chicago-based Nuclear Energy Information Service (NEIS), "Illinois' Nuclear Power Watchdog Group," which opposes all gas and oil 'fracking' because of the radioactive contamination that it could cause (more about that later). Continuing on, speaking as an energy-environmental researcher, your proposed rules to supposedly "regulate" oil and gas 'fracking' (hydraulic fracturing/horizontal drilling) are DANGEROUSLY INADEQUATE--and will NOT protect Illinoisans from the real problems caused by 'fracking.' The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for 'fracking,' making it much easier for the 'fracking' oil and gas companies to store toxic wastewater in open pits, helping the 'fracking' companies avoid accountability when they contaminate drinking water, and imposing only paltry fines on the companies which violate the rules. FURTHERMORE, NO REGULATIONS CAN ACTUALLY MAKE OIL AND GAS 'FRACKING' SAFE! (It poses inherent dangers to public health and safety, inevitably pollutes our water and air, and accelerates disruptive climate change.) Only an IMMEDIATE, COMPLETE, AND PERMANENT STATEWIDE BAN on all 'fracking' will truly protect Illinoisans from 'fracking'-- PLEASE SCRAP THE PROPOSED WEAKER REGULATIONS NOW, AND STOP THE RUSH TO 'FRACK' IN THE "LAND OF LINCOLN" AT ONCE! Here is a final item (that was alluded to earlier): A study by Duke University's Nicholas School of the Environment examined the quality of shale gas wastewater in western Pennsylvania from 'fracking' and the stream water above (and below) the disposal site. Radium levels were about 200 times greater in sediment samples collected where the Josephine Brine Treatment Facility discharges its treated wastewater into Blacklick Creek in western PA than in sediment samples collected just upstream of the plant. In fact, the radioactivity levels found in sediments near the outflow are above the U.S. management regulations, and would only be accepted at a licensed radioactive management facility. (The Marcellus shale gas flowback water is naturally high in salinity and radioactivity.) ["Radioactive Shale Gas Contaminants Found at Wastewater Discharge Site," phys.org, October 2, 2013.] WHILE I AM NOT SURE ABOUT WHAT THIS SITUATION WOULD BE IN DOWNSTATE ILLINOIS, IT WOULD DEFINITELY BE WORTH CLOSELY WATCHING: HOWEVER, WHAT IT BOILS DOWN TO IS THAT WE SHOULD "ERROR ON THE SIDE OF CAUTION"--PLEASE SCRAP YOUR DANGEROUS PRO-OIL AND GAS 'FRACKING' REGULATIONS NOW, AND BAN ALL 'FRACKING' WITH DELIBERATE SPEED!

Sincerely,

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Peter Ayres

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

As you know, the draft IL DNR fracking rules are outrageously and dangerously inadequate, and will not protect Illinoisans and the Illinois environment from fracking. The draft regulations create a series of huge, dangerous loopholes that weaken key parts of the Hydraulic Fracturing Regulatory Act, including: by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing laughable "fines" on corporations which violate the rules. Further, and most importantly, no regulations can make fracking safe. Fracking causes great harm to the public health, safety, and welfare and the environment. It always will inevitably pollute the water and the air and the land, and accelerates climate change. Only a full ban on fracking will protect Illinoisans and the Illinois environment from fracking. Therefore, I demand that IL DNR and the government of Illinois scrap the draft regulations, stop all plans to frack Illinois, and immediately institute a comprehensive, emergency plan to transition the Illinois human society off of all fossil fuels and on to 100% solar and wind power.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Charles McPherson III

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Nancy Broderson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

In spite of Frackers' complaints that the "oil and gas glut" that they've already built up has dropped prices so low that their expected dollar bonanza has dried up, they want to frack the bejeebers out of the whole world - RIGHT NOW, before the environmental disasters they're creating manifest clearly, for all to see. Oil and gas in the ground is a beautiful thing! It will only become more valuable, if we WAIT - while they liquify the gas, put it on ships, and squander our alleged "100-year supply" profiteering in hungrier international markets. We basically GIVE AWAY these mineral resources to them, after all, and very few permanent local jobs are created in the extraction process. And just imagine the real estate boom that Illinois will experience, when this turns out to be one of the few remaining regions where humans, farm animals and wildlife still experience an acceptable quality of life! Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

robert davidson

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Craig Choma

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Ruth Kelley

Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. All the drinking water in my area comes from below ground wells. If the groundwater is contaminated by fracking, my property will become uninhabitable and I will lose all the value invested in my land and my community.

Sincerely,

Robert Ludwig

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Holly M. Kent

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Robert Fratini

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Demetra Joyce

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

C Baldwin

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Deborah Weber

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Patrick Noland

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

If these companies want to do this, in exchange, they should reveal all of the chemicals used and drop their objections on the grounds these are "proprietary". Without that show of good faith they should not be allowed a permit.

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Karen Gubbins

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

John Morawa

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Kim Kinsella

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

David John Ulibarri

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Charles Lee Bradford

The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Galen Weitkamp

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois.

Sincerely,

Jerome C. Urbaniak

RE: Proposed Hydraulic Fracturing Regulatory Act administrative rules

Your proposed fracking rules are dangerously inadequate and will not protect Illinoisans from the dangerous health risks associated with fracking. The draft regulations create a series of dangerous loopholes that actually weaken key parts of the Hydraulic Fracturing Regulatory Act by making it harder for doctors to get access to information about the secret chemicals used for fracking, making it easier for the fracking industry to store toxic wastewater in open pits, helping the fracking industry avoid accountability when it contaminates drinking water, and imposing only paltry fines on companies that violate the rules. Further, no regulations can make fracking safe. It poses inherent dangers to public health and safety, inevitably pollutes the water and air, and accelerates climate change. Only a ban on fracking will truly protect Illinoisans from fracking -- scrap the proposed regulations and stop the rush to frack Illinois. We should be concentrating on wind power instead, a safe renewable energy to harness the high winds that are a prominent feature of our state.

Sincerely,

Heather Owen
