

Entry to Original Illinois Natural Areas Inventory Data into Database Format
Illinois Wildlife Preservation Project #03-L08W

Michael D. Jones, Contractor

June 2003

The objective of this project was to preserve the original INAI sampling data in perpetuity through computerization. To provide the opportunity for researchers and land managers to more efficiently use these data. The creation of Grade A community templates for all community types found in Illinois to be used by site evaluators.

Mr. Jones prepared a CD-R disc that contains an automated archival format that can be preserved in perpetuity. This disk is located with the Natural Heritage Database Unit.
