Burlington, MA 01803

**RE: King**  
**Project Number(s): 1510456**  
**County: Kane**

Dear Mr. Stayer:

This letter concerns the Endangered Species Consultation for the King project noted above, located in Kane County, Township 41 North, Range 8 East, Section 36. This project was submitted for consultation in accordance with the Illinois Endangered Species Protection Act [520 ILCS 10/11], the Illinois Natural Areas Preservation Act [525 ILCS 30/17], and Title 17 Illinois Administrative Code Part 1075.

The entire project involves 'construction of a new tower facility including a 190-foot monopole tower and associated equipment cabinets located within a fenced compound on a 75-foot by 75-foot lease area. Parallel Infrastructure plans to improve an access road from Gordon Lane to the tower area. Utilities will follow the proposed access road'.

The Department has completed its review of the project and determined that with exception below, the resources identified by EcoCAT as in the vicinity are unlikely to be affected.

The state-endangered Blanding's Turtle (*Emydoidea blandingii*) is known to occur in the vicinity of the project area and individual turtles could be affected if they enter the construction area. To avoid any impact to this species, the Department recommends the following measures be implemented by the consultant/developer and incorporated in Village of South Elgin's project authorization:

- Educate personnel working on site about Blanding's Turtle. Post photos of juvenile and adult Blanding's at a central location.
- All construction and maintenance should be limited to October through March.
- If construction cannot be limited to the recommended time frame, install exclusionary fencing around access roads and construction area by the end of March and maintain it through October (if needed) to prevent turtles from entering the construction area.
- Conduct daily inspections during construction to ensure that exclusionary fencing is properly installed (dug into the ground) and to check if turtles are present.

- Trenches should be covered at the end of each work day. Before starting each work day, trenches and excavations should be routinely inspected to ensure no turtles (or other amphibians and reptiles) have become trapped within them.
- If Blanding's Turtles are encountered, crews should stop work and allow the turtle to move out of the way or contact IDNR at 630-553-1372.
- Turtle crossing signs should be placed along roads and by the entrance of both cattle gates, from March to October.

Consultation under 17 Ill. Adm. Code Part 1075 is completed. In accordance with 17 Ill. Adm. Code 1075.40(h), please notify the Department whether the Village will:

- Allow the action to proceed as originally proposed;
- Require the action to be modified per Department recommendations (please specify which measures if not all will be required); or
- Forgo the action.

This consultation is valid for two years unless new information becomes available that was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. If the project has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary.

The natural resource review reflects the information existing in the Illinois Natural Heritage Database at the time of the project submittal, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, you must comply with the applicable statutes and regulations. Also, note that termination does not imply IDNR's authorization or endorsement of the proposed action.

Please contact me if you have questions regarding this review.

Sincerely,

Natalia Jones
